(54) **WASHING METHOD AND WASHING AUXILIARY IMPLEMENT**

(57) Abstract:

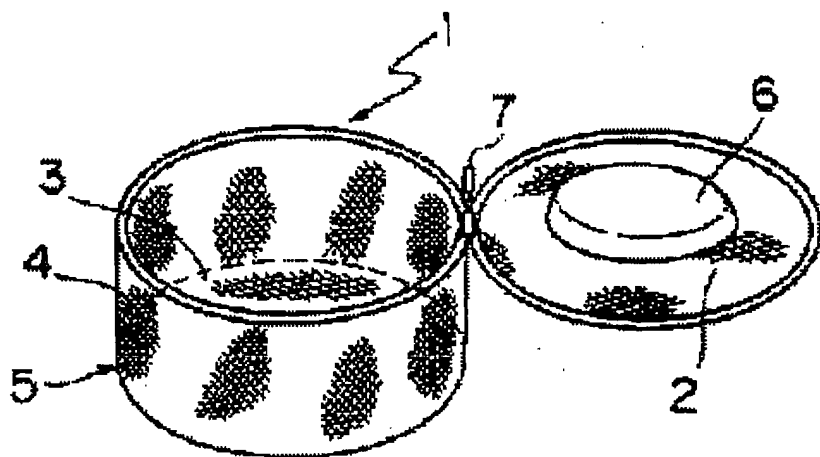

PROBLEM TO BE SOLVED: To provide a washing auxiliary implement capable of preventing the damage to, shape losing and entanglement of laundry within the washing auxiliary implement and also effectively and efficiently washing the laundry in and out of the washing auxiliary implement.

SOLUTION: A net-like bag 5 is formed of a circular upper surface 2, a circular bottom part 3, and a cylindrical side surface part 4. The circular upper surface 2 has a float 6 for partially retaining the shape of the circular upper surface 2. Since the float 6 retains the upper part of the bag 5 near the level of washing water to prevent the contact with the pulsator of a washing basket and also retains the shape of the upper surface part 2 to urge the twisting of the lower part of the bag 5, the damage to or shape losing of laundry within the washing auxiliary implement 1 can be prevented, and a proper movement

can be imparted to the laundry in and out of the washing auxiliary implement 1 to enhance the cleaning effect on the laundry.
